

CSO

Improves chronic disease treatment

A unique end-to-end shared care solution for chronic disease
management

 IntraMed

CSO (Clinical System Organiser) is a unique end-to-end shared care solution for chronic disease management. The basic idea of CSO is to organize a workflow around a given chronic disease and then organize the relevant information in order to optimize tasks and collaboration between each treatment provider and the patient.

As the record follows the patient, the healthcare professionals always have access to updated patient information in CSO. The patients have access to their own record using a patient portal. This means that they can actively participate in their treatment by reporting their own vital signs measurements using the patient portal or home monitoring equipment.

The CSO modules have a wide range of functionalities adapted to the specific areas of treatment. All data, which is gathered through the specialised modules, can be synchronized with EMR, Laboratory Information Systems or other hospital IT systems through a well defined interface. CSO is the standard platform and is the foundation for all our Web-based modules.

CSO supports the following range of Web-based modules:

- CSO/DM – Diabetes
- CSO/AC – Anti Coagulation
- CSO/HT – Hypertension
- CSO/HL – Hyperlipid
- CSO/CHF – Congestive Heart Failure
- CSO/COPD – Chronic Obstructive Pulmonary Disease
- CSO/TeleHealth – Telemonitoring

CSO/TeleHealth can be used alone or in conjunction with the disease specific modules.

CSO increases the number of visits per day and reduces the number of re-admissions as well as improves the quality of care for the patients.

- Prioritizes patients between physician and nurses
- Workflow and data presentation saves preparation time (laboratory results, home monitoring, medicine)

- High quality consultations
- Built-in decision support
- Document and report generator
- Quality of care monitoring

- A proven, scalable and future-oriented solution
- Developed to be integrated and inter-operated with existing medical systems
- Consistent, up-to-date and intuitive user interface
- Efficient and highly structured data collection and data presentation
- Increases quality of care by introducing expert level decision support and knowledge sharing
- Optimized distribution of work between the clinicians
- Highly configurable to suit local needs
- Built-in clinical database provides real time quality assurance

Benefits

CSO improves chronic disease treatment within many different areas:

Medical outcome:

- Consistent application of treatment protocol leads to greater improvement in treatment results

Economic outcome:

- Better task and cases allocation between nurses, physicians and specialists
- Data presentation reduces consultation preparation time
- Improvement of treatment reduces the number of complications

Quality outcome:

- Powerful report generator allows to monitor quality of care

Patient satisfaction outcome:

- Better standardized treatment taking into account and organizing relevant information
- Management by exception reduces number of re-admissions
- Information patient letters available after each consultation

References

The CSO platform is already being used by various hospitals/partners:

- More than 60% of the hospitals in Denmark
- Medical Center of Plano, Texas, USA
- A large international telehealth service provider

Company information

IntraMed is a leading Scandinavian eHealth solution provider helping healthcare organizations to enhance the efficiency of patient health care by using Web-based shared care solutions. The modules are developed in cooperation with leading clinicians. Our vision is to be the leading developer of electronic healthcare systems for chronic diseases.

IntraMed was founded in 1997 and our software has been used by healthcare professionals since 1999.
